GT™ Series

7 Application Modes

- Leak Test Mode** measures methane in three different distinct ranges (ppm/LEL/%Volume). Autoranging between all three ranges, audible, visual, and geiger alarms, and ergonomic design allows for easy one handed operation. Also ideal for carbon monoxide investigations.
- Confined Space Mode** measures up to 4 gases (O₂, LEL, CO, H₂S) simultaneously with audible visual alarms, datalogging, and min/max values.
- Barhole Mode** for testing underground gas leaks. In this mode the GT measures gas beginning in the LEL range and autoranges to % Volume. Barhole probe included with instrument.
- Carbon Monoxide Mode** measures CO directly in ppm. Menu items for air free CO (O₂ correction) when fitted with an O₂ sensor, and differential CO.
- Purge Mode** for measuring methane from 0-100% Volume in inert atmospheres.
- Sniffer Mode** enables rapid leak detection by measuring methane from 0-10,000ppm with the semi-conductor fitted at the end of the flexi probe. Audible/visual geiger allows for easy pinpointing of leaking pipes.
- Pressure Mode** measures from 0-60" of water column via a pressure sensor on the back of the instrument. Ideal for tightness tests on gas systems up to 2 PSI.
