Calibration Gas is a requirement for everyone using fixed or portable gas detection within the workplace. Portable detection requires a monthly calibration and verification before each use. Disposable cylinders that house the gas can be a nuisance when empty; they cannot be reused and are often interpreted as hazardous waste within the workplace.

Gasco introduced an alternative replacement to these disposable cylinders. The ecosmart family of cylinders contain standard gas mixes at no additional cost per liter.

- ecosmart cylinders are a reusable replacement for the disposables which are currently in the marketplace.
- ecosmart cylinders offer the same dimensions, and more, as the current disposable products.
- ecosmart cylinders utilize the same valve as in disposable products; therefore there is no need to change out regulators.
- ecosmart cylinders fall in line with many green initiative programs. It makes sense to reduce, reuse, and recycle!

Customers do not change how they buy gas. The ecosmart program simply solves the issue of what to do with empty cylinders. Returning cylinders is simple. For free return shipping label: go to www.gascogas.com click on **ecosmart™** reusable cylinder returns, complete form and print.
